

## **PROJECT**

### **IMPLEMENTATION OF LAN AND WI-FI NETWORKS FOR OPTIMIZING OPERATIONS IN A PRINTING STORE**

Group 2

Names : Flora Aulia Nilmaya (2421010058)  
Muhammad Fakhri Amir (2421010125)  
Rizkinabila Pramilia (2421010202)

Class : 2CS2

**CEP-CCIT**

**FACULTY OF ENGINEERING UNIVERSITY INDONESIA**

**2025**

## **Implementation of LAN and Wi-Fi Networks for Optimizing Operations in a Printing Store**

Batch Code : 2CS2  
Start Date : February 26, 2025  
End Date : March 7, 2025  
Name of Faculty : Muhammad Riza Iqbal

Names of Developer :

1. Flora Aulia Nilmaya
2. Muhammad Fakhri Amir
3. Rizkinabila Pramilia

Date of Submission : March 7, 2025

## **CERTIFICATE**

This document serves as verification for the report "Implementation of LAN and Wi-Fi Networks for Optimizing Operations in a Printing Store." written by Flora Aulia Nilmaya, Muhammad Fakhri Amir, and Rizkinabila Pramilia. The goal of this project is to complete the CCIT-FTUI course requirement.

## ACKNOWLEDGEMENT

We would like to extend our heartfelt appreciation to our advisor, **Mr. Muhammad Riza Iqbal**, for his unwavering support, guidance, and encouragement throughout this project. His constructive feedback and insightful suggestions have been invaluable in shaping the direction and quality of our research. We are deeply grateful for his expertise and dedication, which motivated us to strive for excellence at every stage of this work.

We would also like to acknowledge the invaluable contributions of our colleagues and peers, whose collaborative spirit and shared knowledge helped us to overcome challenges and refine our ideas. Special thanks to CCIT FT for providing the necessary resources and a conducive environment to conduct this research. The collective wisdom and support of our peers have been a driving force in pushing the boundaries of this project.

Finally, we are immensely grateful to our families and friends for their endless patience, understanding, and moral support throughout this journey. Their encouragement has been a source of strength during the most challenging moments. We would also like to thank the participants and organizations involved, whose cooperation and contributions were essential to the successful completion of this work.

## SYSTEM ANALYSIS

- **System Summary**

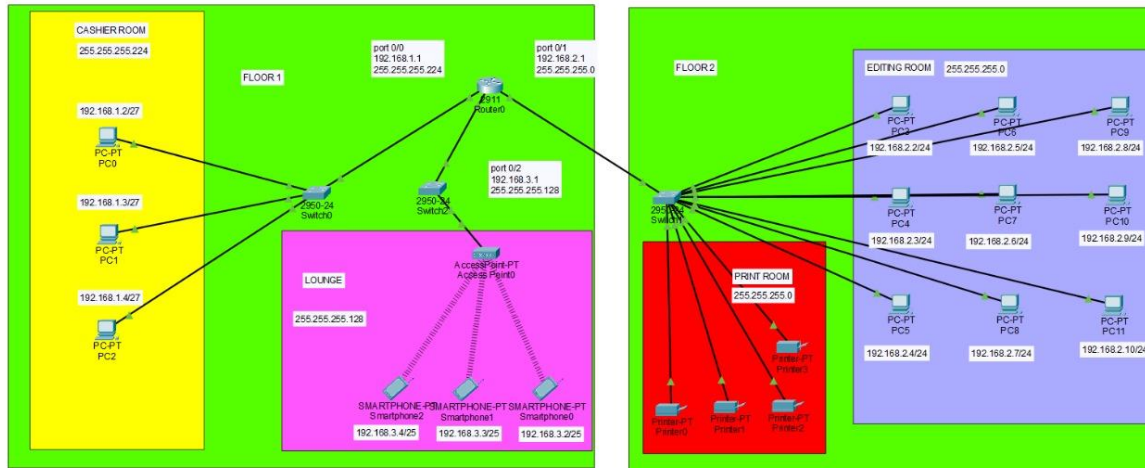

The network infrastructure consists of two interconnected floors, each with a dedicated router and switch, ensuring structured data flow and optimized network performance. Floor 1 includes a combination of wired and wireless devices, such as three PCs, three printers, and a wireless router for mobile device connectivity. The wireless router extends network access to smartphones, enhancing flexibility. Floor 2 features multiple PCs connected through a switch, ensuring efficient communication. The two floors are linked via routers that facilitate inter-network communication using static or dynamic routing methods. The network design allows for centralized resource sharing, including printing services and internet access.

- **System Processes**

1. Data Transmission & Routing – PCs, printers, and mobile devices communicate through their respective switches and routers. Routing protocols (such as static routes or dynamic protocols if configured) direct data packets efficiently between floors.
2. Wireless & Wired Connectivity – Smartphones access the network via the wireless router on Floor 1, while wired PCs connect through the switch infrastructure for stable connections.
3. Inter-Floor Communication – Routers interconnect both floors, enabling seamless data exchange and allowing centralized access to shared resources such as printers.
4. Internet Access & Bandwidth Allocation – The routers manage network traffic, ensuring adequate bandwidth distribution for both wired and wireless users. Quality of Service (QoS) may be applied to prioritize critical data.
5. IP Addressing & Network Segmentation – Each device is assigned a unique IP address. Possible use of subnetting or VLANs to improve network security and performance.
6. Device Management & Security – Network configurations may include security mechanisms such as access control lists (ACLs) to regulate traffic between floors and prevent unauthorized access.

This network layout ensures optimized operations for a printing store, providing seamless communication, resource sharing, and an efficient balance between wired and wireless connectivity.

## NETWORK TOPOLOGY

Location	Device	IP Address	Subnet Mask	Gateway
Floor 1	Router0 (2911)	192.168.1.1	255.255.255.224	None
		192.168.2.1	255.255.255.0	None
		192.168.3.1	255.255.255.128	None
	Switch0 (2950-24)	None	None	None

# CONFIGURATION

## 1. Configuration Within Router

Configuration with the router will start first. The Command Line Interface (CLI) can be accessed by opening the router interface. All settings in this router should be recorded and saved. Customize the interface configuration according to the cable topology specific to your device. The IP Address configuration should be prioritized at first.

Follow the commands below in the Command Line Interface. Following this step is to repeat the main router configuration for routers with DHCP clients, as well as set additional DHCP settings.

GigabitEthernet0/0	
Port Status	<input checked="" type="checkbox"/> On
Bandwidth	<input type="radio"/> 1000 Mbps <input checked="" type="radio"/> 100 Mbps <input type="radio"/> 10 Mbps
Duplex	<input type="radio"/> Half Duplex <input checked="" type="radio"/> Full Duplex
MAC Address	00E0.A3A3.0201
IP Configuration	
IPv4 Address	192.168.1.1
Subnet Mask	255.255.255.224
Tx Ring Limit	10

GigabitEthernet0/1	
Port Status	<input checked="" type="checkbox"/> On
Bandwidth	<input type="radio"/> 1000 Mbps <input checked="" type="radio"/> 100 Mbps <input type="radio"/> 10 Mbps
Duplex	<input type="radio"/> Half Duplex <input checked="" type="radio"/> Full Duplex
MAC Address	00E0.A3A3.0202
IP Configuration	
IPv4 Address	192.168.2.1
Subnet Mask	255.255.255.0
Tx Ring Limit	10

GigabitEthernet0/2	
Port Status	<input checked="" type="checkbox"/> On
Bandwidth	<input type="radio"/> 1000 Mbps <input checked="" type="radio"/> 100 Mbps <input type="radio"/> 10 Mbps
Duplex	<input type="radio"/> Half Duplex <input checked="" type="radio"/> Full Duplex
MAC Address	00E0.A3A3.0203
IP Configuration	
IPv4 Address	192.168.3.1
Subnet Mask	255.255.255.128
Tx Ring Limit	10

## CONFIGURATION

Once the IP addresses have been successfully assigned, the next step is to configure routing, which involves creating paths to connect all the different networks using the Dynamic Routing Information Protocol (RIP), starting from the main router and continuing to the marketing routers.

The rules in RIP routing require specifying the source network (the assigned IP part) and destination network (the assigned IP on the serial interface) to ensure effective and directed communication between all connected networks.

# CONFIGURATION

## ROUTER 0

### // Enabling router privileges mode

```
Router> enable
```

```
Router# configure terminal
```

### // Setup Router Password

```
Router(config)# enable password routerpassword1
```

### // Setup IP Cashier

```
Router(config)# interface gigabitEthernet 0/0
```

```
Router(config-if)# ip address 192.168.1.1 255.255.255.0
```

```
Router(config-if)# no shutdown
```

### // Setup IP Editing Room

```
Router(config)# interface gigabitEthernet1/0
```

```
Router(config-if)# ip address 192.168.2.1 255.255.255.0
```

```
Router(config-if)# no shutdown
```

### // Setup IP Lounge

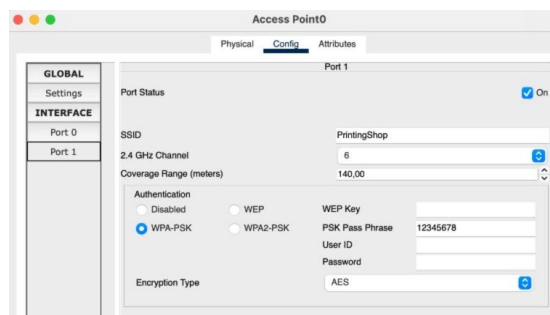

```
Router(config)# interface gigabitEthernet2/0
```

```
Router(config-if)# ip address 192.168.3.1 255.255.255.0
```

```
Router(config-if)# no shutdown
```

## 2. Setting up Access Point

Setting up the access point for Lounge, and don't forget to turn on port 0 also.

## CONFIGURATION

### 3. Security Configuration with Access Control List

The final configuration involves implementing a security protocol using ACL (Access Control List). Specifically, blocking incoming ICMP (Internet Control Message Protocol) protocol to the cashier room, preventing any potential DoS attacks.

#### ROUTER 0

##### // Traffic control ACL

```
Router> enable
```

```
Router# configure terminal
```

##### // Setup ACL on Port 0/1 and 0/2

```
Router(config)#access-list 100 deny ip 192.168.2.0 0.0.0.255 192.168.1.0.0.0.0.31
```

```
Router(config)#access-list 100 deny ip 192.168.3.0 0.0.0.255 192.168.1.0.0.0.0.31
```

```
Router(config)#access-list 100 permit ip any any
```

```
Router(config)#interface GigabitEthernet0/1
```

```
Router(config-if)#ip access-group 100 in
```

```
Router(config)-if#end
```

# CONFIGURATION

## 4. End-Devices Setup

Now it's time to configure the end devices. Configuring end devices involves simply changing the IP mode in each device and adjusting their network settings using either static or DHCP by going to desktop and click on IP Configuration.

In static networks, it's important to designate the gateway IP as the IP address of the router interface leading into the network. For example, if the network's IT section is received through interface 0/0, that interface's IP should be used as the gateway IP.

### PC1 Cashier (Static)

The screenshot shows the configuration window for PC1. The 'Config' tab is selected. On the left, the 'INTERFACE' section is expanded, showing 'FastEthernet0'. The main area is titled 'Global Settings'. Under 'Gateway/DNS IPv4', the 'Static' radio button is selected, and the 'Default Gateway' is set to '192.168.1.1'. The 'Gateway/DNS IPv6' section has the 'Automatic' radio button selected. The 'Display Name' is 'PC1' and the 'Interfaces' list contains 'FastEthernet0'.

### PC2 Cashier (Static)

The screenshot shows the configuration window for PC2. The 'Config' tab is selected. On the left, the 'INTERFACE' section is expanded, showing 'FastEthernet0'. The main area is titled 'Global Settings'. Under 'Gateway/DNS IPv4', the 'Static' radio button is selected, and the 'Default Gateway' is set to '192.168.1.1'. The 'Gateway/DNS IPv6' section has the 'Automatic' radio button selected. The 'Display Name' is 'PC2' and the 'Interfaces' list contains 'FastEthernet0'.

# CONFIGURATION

## PC4 Editing Room (Static)

The screenshot shows the configuration window for PC4. The 'Config' tab is selected. On the left, the 'INTERFACE' section is expanded, showing 'FastEthernet0' and 'Bluetooth'. The main area is titled 'Global Settings'. Under 'Display Name', 'PC4' is entered. Under 'Interfaces', 'FastEthernet0' is selected. In the 'Gateway/DNS IPv4' section, 'Static' is selected, and 'Default Gateway' is set to '192.168.2.1'. The 'Gateway/DNS IPv6' section has 'Automatic' selected.

Section	Field	Value
GLOBAL	Display Name	PC4
	Interfaces	FastEthernet0
Gateway/DNS IPv4	DHCP	<input type="radio"/>
	Static	<input checked="" type="radio"/>
	Default Gateway	192.168.2.1
	DNS Server	
Gateway/DNS IPv6	Automatic	<input type="radio"/>
	Static	<input checked="" type="radio"/>
	Default Gateway	
	DNS Server	

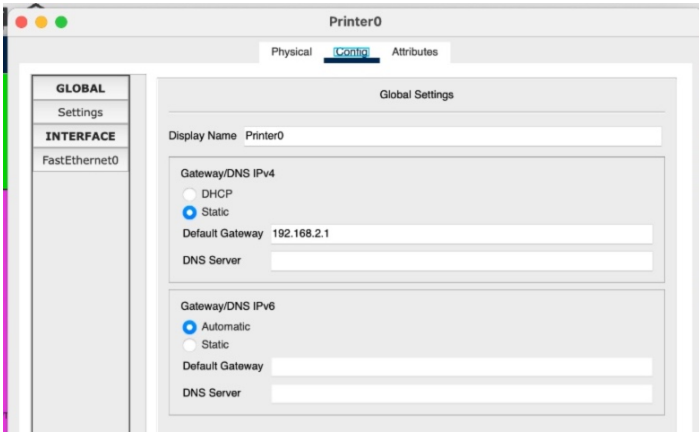

## PC5 Editing Room (Static)

The screenshot shows the configuration window for PC5. The 'Config' tab is selected. On the left, the 'INTERFACE' section is expanded, showing 'FastEthernet0' and 'Bluetooth'. The main area is titled 'Global Settings'. Under 'Display Name', 'PC5' is entered. Under 'Interfaces', 'FastEthernet0' is selected. In the 'Gateway/DNS IPv4' section, 'Static' is selected, and 'Default Gateway' is set to '192.168.2.1'. The 'Gateway/DNS IPv6' section has 'Automatic' selected.

Section	Field	Value
GLOBAL	Display Name	PC5
	Interfaces	FastEthernet0
Gateway/DNS IPv4	DHCP	<input type="radio"/>
	Static	<input checked="" type="radio"/>
	Default Gateway	192.168.2.1
	DNS Server	
Gateway/DNS IPv6	Automatic	<input type="radio"/>
	Static	<input checked="" type="radio"/>
	Default Gateway	
	DNS Server	

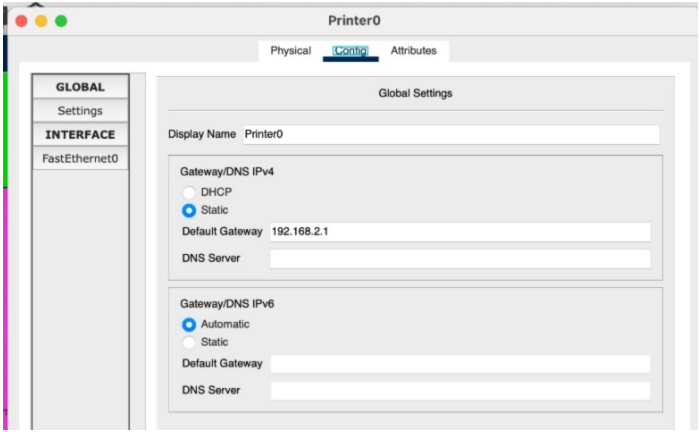

# CONFIGURATION

## Print0 2<sup>nd</sup> Floor (Static)

The screenshot shows the 'Printer0' configuration window. The 'Global Settings' tab is active. The 'Display Name' is 'Printer0'. Under 'Gateway/DNS IPv4', the 'Static' radio button is selected, and the 'Default Gateway' is set to '192.168.2.1'. The 'DNS Server' field is empty. Under 'Gateway/DNS IPv6', the 'Automatic' radio button is selected, and the 'Default Gateway' and 'DNS Server' fields are empty.

## Print1 2<sup>nd</sup> Floor (Static)

The screenshot shows the 'Printer0' configuration window. The 'Global Settings' tab is active. The 'Display Name' is 'Printer0'. Under 'Gateway/DNS IPv4', the 'Static' radio button is selected, and the 'Default Gateway' is set to '192.168.2.1'. The 'DNS Server' field is empty. Under 'Gateway/DNS IPv6', the 'Automatic' radio button is selected, and the 'Default Gateway' and 'DNS Server' fields are empty.

# SIMULATION

## 5. Connection Testing

### PC0 Cashier to Router (ICMP Testing)

```
Cisco Packet Tracer PC Command Line 1.0
C:\>192.168.1.1
Invalid Command.

C:\>ping 192.168.1.1

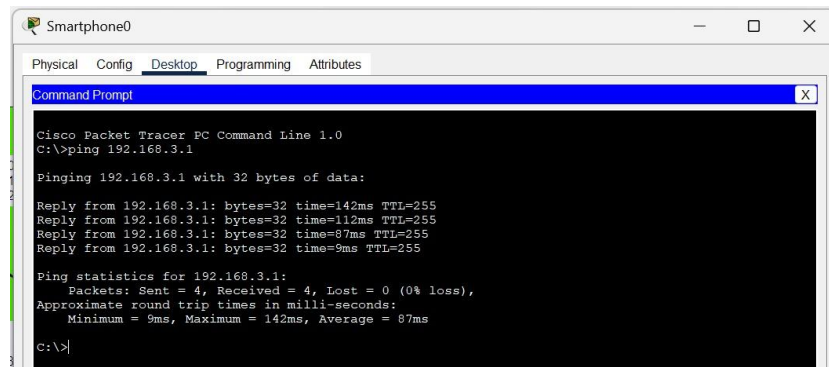

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

C:\>
```

### Smartphone Lounge to Router (ICMP Testing)

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 192.168.3.1

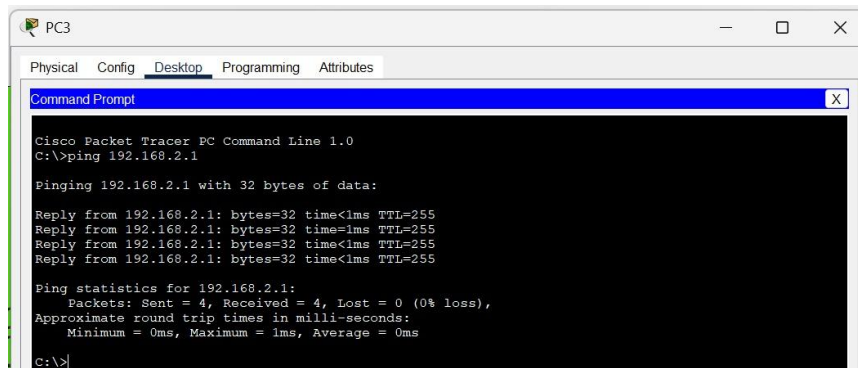

Pinging 192.168.3.1 with 32 bytes of data:

Reply from 192.168.3.1: bytes=32 time=142ms TTL=255
Reply from 192.168.3.1: bytes=32 time=112ms TTL=255
Reply from 192.168.3.1: bytes=32 time=87ms TTL=255
Reply from 192.168.3.1: bytes=32 time=9ms TTL=255

Ping statistics for 192.168.3.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 9ms, Maximum = 142ms, Average = 87ms

C:\>|
```

### PC3 Editing Room to Router (ICMP Testing)

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 192.168.2.1

Pinging 192.168.2.1 with 32 bytes of data:

Reply from 192.168.2.1: bytes=32 time<1ms TTL=255
Reply from 192.168.2.1: bytes=32 time<1ms TTL=255
Reply from 192.168.2.1: bytes=32 time<1ms TTL=255
Reply from 192.168.2.1: bytes=32 time<1ms TTL=255

Ping statistics for 192.168.2.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 1ms, Average = 0ms

```

## REQUIREMENTS

### Hardware :

1. Lenovo V14 G2

### Operating System :

1. Windows 10 64-bit

### Software :

1. Cisco Packet Tracer
2. Ms. Word
3. Google Chrome

No	Filename	Remarks
1	2CS2 Project 1.pdf	Microsoft Words contain Research paper about the project
2	Project Cisco Really Final.pkt	Packet Tracer file contains The network simulation
3	Project 1 presentation.pdf	Presentation file
